ENGINEERS VALUE PROPOSITION

NASH is the only Australian industry association specialising in cold formed steel design for residential and low-rise buildings.

This focused effort has led to the development and publication of three engineering and building standards that are referenced in the National Construction Code – the only industry association ever to do this.

NASH has a strong technical network of practising engineers, academic researchers, steel product suppliers and fabrication businesses.

NASH technical strength is growing and we would like more practising engineers to be part of this growth.

By choosing to be a member of NASH, engineers can expect:

- to keep abreast of latest developments in cold formed and steel framing design through newsletters, chapter meetings, seminars and workshops
- To have input into NASH Standards, relevant Australian Standards and other publications
- To network with other members of the steel framing industry
- To receive referrals via NASH from business and public enquirers
- To be listed on NASH website, with linking to your own site
- To see members' achievements promoted through case studies etc
- To receive expert technical advice from NASH and/or referral to other expert sources of information
- To receive discounts on the cost of NASH publications including Standards and Handbooks

Naturally our work is only achievable through the fees subscribed by members and sponsors, and the enthusiastic contributions of our members.
